FAIRCRAFT

ENGINEERING, INC.

PORTER, INDIANA 46369

Gentlemen:

Thank you for your inquiry and this opportunity to inform you of our services.

Faircraft is a five-year old company devoted to designing and engineering cases for instrument manufacturers. We have designed and now make cases for photographic equipment, musical instruments and scientific instruments for many nationally known companies.

It is our utmost objective to design and construct cases which will reflect the quality of the instrument they contain. Our cases are built to last and to retain their beauty for the lifetime of the instrument. All of these cases are molded of what we believe to be the toughest and most lasting in beauty of the commercial thermo plastics. That is acrilonitrile-butadiene-styrene. All exposed edges are trimmed with rigid aluminum. Surface of material is a tough, scuff resistant, leather like grain. Hinges, locks and hardware are made of plated steel and die-cast metal.

Complete tooling costs including initial sketches, working prints, samples and final tooling usually range from \$500 to \$2000, depending, of course, on the complexity of the case.

We have a few items which we carry in stock. We also have tooling for certain sizes of cases which is available for use at a small setup charge, depending on the size of the order. These are described on the attached brochure.

We wish to thank you again for your interest. If there is anything we can do or any questions we can answer, we would be most happy to do so.

Sincerely yours,

John K. Johnston
Vice President - Sales
